DIGESTIVE ZYME

Look great, feel healthier, and prevent: Indigestion Heart-burn Food allergies
 Toxicity Chemical imbalances Bad disposition Moodiness Fullness Arthritis Autoimmune disease Vitamin B 12 deficiency Chronic fatigue Eczema Inflammation Irritable bowel

Say goodbye to indigestion, heartburn irregularity & other nagging health problems ... say hello to more energy and feeling great!

According to the Surgeon General, 8 out of 10 leading causes of death in the United States are diet related.

In other words, your ability to stay healthy requires your food to be fully digested so your body gets enough nutrients to fight off illness.

Unfortunately, if you're like most Americans, your food is simply not digested properly. That's because you eat so many processed foods that contain chemicals and preservatives your body simply cannot digest.

Even if you try to eat right, food enzymes are destroyed at temperatures above 118 °F. This means that cooked and processed foods contain few, if any, enzymes.

No Wonder You Don't Feel Great

When your body isn't getting the nutrition it needs, illness can run rampant.

Plus, undigested food becomes toxic, feeds harmful bacteria, contributes to the buildup of accumulated, rotting trash in your colon, and hampers elimination.

Fortunately, there's a solution.

"The increased use of food enzymes promotes a decreased rate of exhaustion of the enzyme potential [longer life]" -- Dr. Edward Howell, Author of several books on enzymes
